

Portfolio - Beautify with CSS

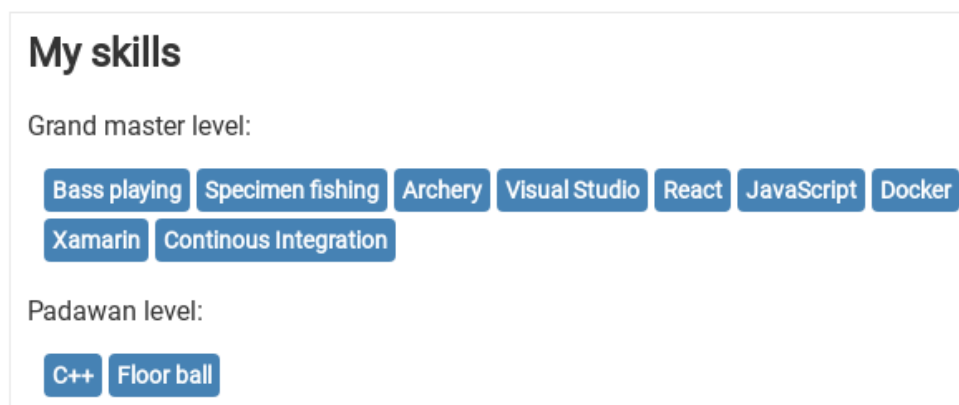

Based on your last mandatory exercise you should style the entire page with CSS.

Rules:

- **Footer and header** should have the same **background color**. Both footer and header should take up **full width**.
- All **sections** in the **main content-section** should have **borders** so it's easy to see what goes together.
- Links should **increase** in size when **hovering** them and they should be placed **vertically**. See this example:

- The list items in the skill list should be placed **horizontally**.

- Use a font from [Google fonts](#) throughout the page.
- Use at least one **pseudo-class**
- Use at least one **media query**

Use proper identifiers

When identifying an element you should pick an appropriate **selector**.

Try to use **selectors** and **combinators** as much as possible. You are of course allowed to use **id** and **class** also.

For elements that appear **once and only once**, use **id**. If you want to select **many different elements** with a selector, use **class** or the **tag** directly.

No restructuring allowed

Your HTML should be in a state where you don't need to touch it at all. CSS will do all the work in this exercise.

There should **not** be **any** visual elements at all. This means no

- `hr`
- `br`
- `<div bgcolor="red">`
- `<div height="300">`

These are **VERBOTEN!**

The exception here is adding the class and id attributes. Of course this is allowed.

Selector cheat sheet

```
/* Select by class */
.class-name {
    color: #fff;
}

/* Select by id */
#id-name {
    margin-top: 20px;
}

/* Select by tag */
section {
    background-color: #fff;
}

/* Select by pseudo-class */
article:first-of-type {
    padding: 0 20px;
}
```
